

### 10-Channel High-Speed Universal PDIC

#### Features

- ☐ Triple wavelength 405nm, 650nm and 780nm
- □ 120MHz bandwidth high speed RF-Channels
- 8 selectable gain modes, sleep mode
- ☐ Tristate inputs for gain mode selection
- □ Two PD-pattern design
- Low noise design
- ☐ Integrated test mode for easy pick-up adjustment
- ☐ Small-size Ceramic glass-lid package 20-pin 4.5mm x 4.0mm x 1.25mm
- Integrated 49Bit OTP for parameter trimming
- ☐ High impedance outputs in sleep mode
- On chip supply blocking

### **Ordering Information**

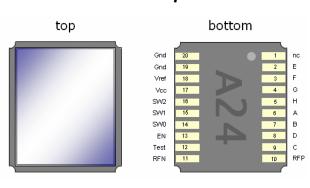

Part No. Temperature Code MLX75012  $(-25 \,^{\circ}\mathbb{C})$  to  $85 \,^{\circ}\mathbb{C})$ 

Package Code 20L CSP Opto Ceramic Option code

## **Application Examples**

- ☐ HD-DVD or Blu-Ray® applications read/write
- ☐ High-Speed DVD read/write
- □ CD read/write
- writable data storage optical devices

## Pin Description

## General Description

The MLX75012 is a triple wavelength photo detector IC (PDIC) with integrated amplifiers and control circuitry for use in optical pick-up heads. Its 20 photo detectors are optimized for the detection of 405nm, 650nm, and 780nm wavelength laser light used in HD-DVD, Blu-Ray<sup>®</sup>, DVD, and CD applications and are arranged in two 3-beam photo detector arrays in the chip centre. The ten signal channels consist of four main-detector channels (A, B, C, and D), four sub-detector channels (E, F, G, H), and two channels with balanced differential output (RFP, RFN). The device features a test mode for PDIC adjustment, a sleep mode, and 8 selectable gain modes, which are controllable by digital- and tri-state logic. The integrated 49Bit one-time programmable ROM allows parameter trimming of the MLX75012 for high product quality. The MLX75012 is manufactured in a 0.6μm BiCMOS-technology.

## 10-Channel High-Speed Universal PDIC

### 6 Outstanding Features

The MLX75012 opens the door to the new world of violet laser based storage-technology. By combining the traditional red and infrared applications in a high-speed-, low-power design a real universal device was created that can be used in any thinkable application ranging from HD-DVD recorders over gaming-equipment to the use in ultra-slim drives in new generation laptops. To allow small-size and cost-effective solutions in optical pick-up design, the MLX75012 offers two complete three-beam Detector patterns that can be used by dual-wavelength lasers. At the same time, the robust 20-pin CSP Ceramic Glass-Lid package offers small-size outer dimensions.

The system concept of the MLX75012 universal PDIC is based on newly developed blue enhanced detectors that ensure a high spectral sensitivity even before the first amplifier is involved. A 49-Bit one time programmable ROM guarantees high parameter stability by trimming at the device manufacturing process.

To support the adjustment process of pick-up systems in manufacturing, the MLX75012 offers a special test-mode in which one of the tracking detector-array can be switched off.

## 10-Channel High-Speed Universal PDIC

### 8 Standard information regarding manufacturability of Melexis products

Our products are classified and qualified regarding soldering technology, solderability and moisture sensitivity level according to following test methods:

#### Reflow Soldering SMD's (Surface Mount Devices)

- IPC/JEDEC J-STD-020
   Moisture/Reflow Sensitivity Classification for Nonhermetic Solid State Surface Mount Devices (classification reflow profiles according to table 5-2)
- EIA/JEDEC JESD22-A113
   Preconditioning of Nonhermetic Surface Mount Devices Prior to Reliability Testing (reflow profiles according to table 2)

#### Wave Soldering SMD's (Surface Mount Devices) and THD's (Through Hole Devices)

- EN60749-20
  - Resistance of plastic- encapsulated SMD's to combined effect of moisture and soldering heat
- EIA/JEDEC JESD22-B106 and EN60749-15
   Resistance to soldering temperature for through-hole mounted devices

#### Iron Soldering THD's (Through Hole Devices)

EN60749-15
 Resistance to soldering temperature for through-hole mounted devices

#### Solderability SMD's (Surface Mount Devices) and THD's (Through Hole Devices)

 EIA/JEDEC JESD22-B102 and EN60749-21 Solderability

For all soldering technologies deviating from above mentioned standard conditions (regarding peak temperature, temperature gradient, temperature profile etc) additional classification and qualification tests have to be agreed upon with Melexis.

The application of Wave Soldering for SMD's is allowed only after consulting Melexis regarding assurance of adhesive strength between device and board.

Melexis is contributing to global environmental conservation by promoting **lead free** solutions. For more information on qualifications of **RoHS** compliant products (RoHS = European directive on the Restriction Of the use of certain Hazardous Substances) please visit the quality page on our website: <a href="http://www.melexis.com/quality.asp">http://www.melexis.com/quality.asp</a>

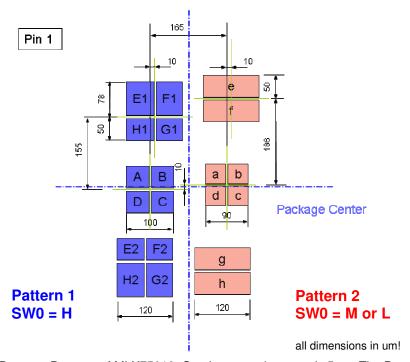

### 9 ESD Precautions

Electronic semiconductor products are sensitive to Electro Static Discharge (ESD).

Always observe Electro Static Discharge control procedures whenever handling semiconductor products.

### 10 Photo Diode Pattern

**Fig. 10:** The two Detector Patterns of MLX75012. Gap between detectors is 5um. The Patterns are switched by changing from CD- to DVD-Mode at pin 16 (SW0).

## 10-Channel High-Speed Universal PDIC

## 11 Package Information

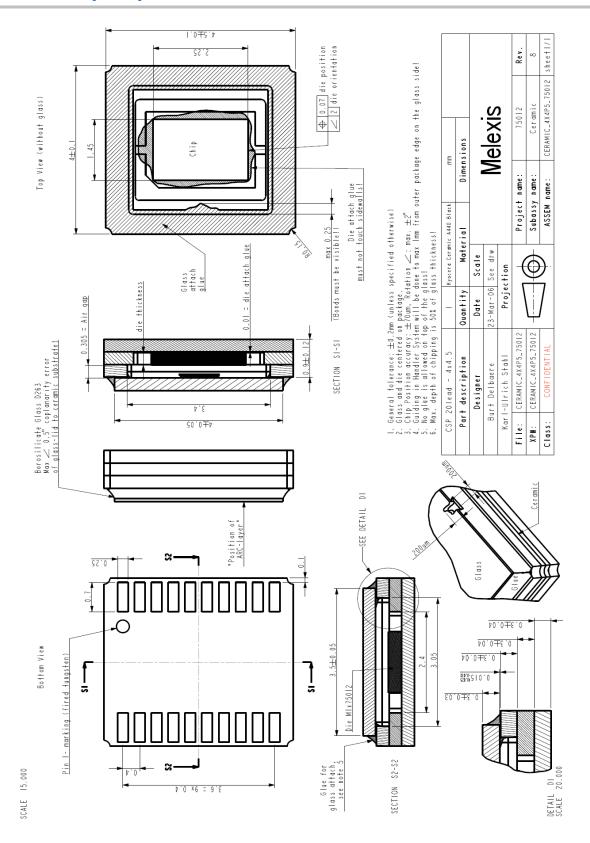

| Parameter                   | Unit             | Typical Dimensions <sup>3</sup> for                      |
|-----------------------------|------------------|--|
|                             |                  | 20L CSP SMD Ceramic Package with Glass-Lid               |
| Glass Type                  | Refractive Index | 1.5300 @ 486nm   |
|                             | Trondouvo maox   | 1.5204 @ 656nm   |
| Glass x/y Dimesion          | [µm/µm]          | 3500 / 4000  |
| Glass Thickness             | [µm]             | 300  |
| Glass Type                  |                  | Borosilicate Glass D263                                  |
| Air gap above Detector      | [µm]             | 300  |
| No. of Pins                 |                  | 20   |
| Package Height              | [mm]             | 1.25 (incl. Glass)                                       |
| Package Width               | [mm]             | 4  |
| Package Length              | [mm]             | 4.5  |
| Pin Pitch                   | [mm]             | 0.4  |
| Pin Length                  | [mm]             | 0.7  |
| Exposed Pad                 |                  | no   |
| Marking                     |                  | yes, on bottom: 3digit Lot/Time Code                     |
| MSL                         |                  | MSL-3  |
| Pin 1 Marking               |                  | yes, Bottom (dot of fired tungsten) and Top (die-paddle) |
| Chip Position Tolerance x/y | [µm]             | centered ±70   |
| max Chip Rotation θ         | [deg]            | ±2   |
| Chip ARC                    |                  | Yes  |

Table 11: Package Measures

<sup>&</sup>lt;sup>3</sup> For Tolerances please see the package drawing on page 17

#### 12 Disclaimer

Devices sold by Melexis are covered by the warranty and patent indemnification provisions appearing in its Term of Sale. Melexis makes no warranty, express, statutory, implied, or by description regarding the information set forth herein or regarding the freedom of the described devices from patent infringement. Melexis reserves the right to change specifications and prices at any time and without notice. Therefore, prior to designing this product into a system, it is necessary to check with Melexis for current information. This product is intended for use in normal commercial applications. Applications requiring extended temperature range, unusual environmental requirements, or high reliability applications, such as military, medical life-support or life-sustaining equipment are specifically not recommended without additional processing by Melexis for each application.

The information furnished by Melexis is believed to be correct and accurate. However, Melexis shall not be liable to recipient or any third party for any damages, including but not limited to personal injury, property damage, loss of profits, loss of use, interrupt of business or indirect, special incidental or consequential damages, of any kind, in connection with or arising out of the furnishing, performance or use of the technical data herein. No obligation or liability to recipient or any third party shall arise or flow out of Melexis' rendering of technical or other services.
